# COMPANY PROFILE

公司简介

JZTH is controlled by Weihai Haiwang Group and specializes in the R&D and production of dry separators, X-ray ash analyzers, intelligent heavy medium cyclones, intelligent heavy medium density control systems, intelligent coarse slime sorters and other equipment. We have a 30 years professional background in coal preparation. JZTH Technology Center has established long-term industry-university-research cooperation relationships with domestic first-class coal universities such as Harbin Institute of Technology (Weihai), China University of Mining and Technology, Central South University, Anhui University of Science and Technology, and Taiyuan University of Technology.

JZTH insists on being led by innovation, adhering to the concept of "intelligent technology, green coal", and continues to develop efficient coal sorting equipment and systems to promote the intelligent and green development of coal.

# QUALIFICATION & HONOR

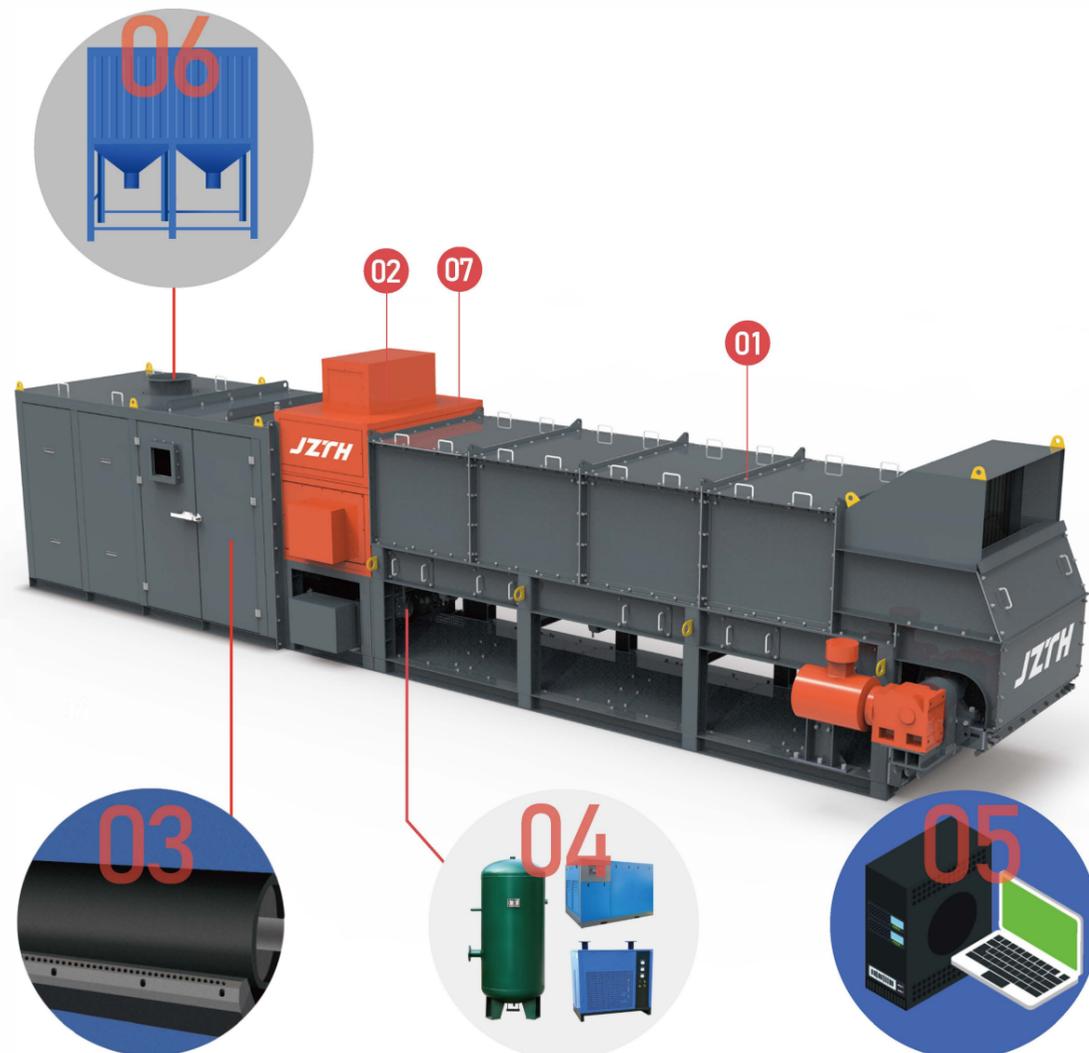

# KEY TECHNOLOGY

# PRODUCT INTRODUCTION

Intelligent dry separator - a mineral sorting equipment based on advanced imaging and artificial intelligence technology. The X-ray imaging system is used to obtain the characteristics of coal and gangues. The HX intelligent dry separator establishes an adaptive analysis model to accurately identify coal and gangues. It uses an intelligent algorithm to control high-pressure wind through a unique structure nozzle for precise injection. Realize the separation of coal and gangues

## 01 Distributed subsystem

It consists of a feeding mechanism, a stabilizing mechanism, a conveyor belt, etc., and spreads the raw coal evenly so that X-ray imaging of the material can be achieved.

## 02 Imaging recognition subsystem

Dual-energy X-ray, laser area array radar, and CCD customized combined identification solutions can accurately obtain material characteristics and distinguish coal and gangues.

## 03 Operation subsystem

The solenoid valve accurately controls the array spray gun to sort the thrown coal or stone through the depressurized air.

## 04 Air supply subsystem

It is composed of air compressor, cold dryer, gas storage tank and other equipment, which provides power for efficient sorting of dry separator.

## 05 Intelligent control system

The control system includes modules, frequency conversion cabinets, etc. It has local, remote, operation, fault passive dry node signals, industrial Ethernet interface, and accepts centralized control operation signals.

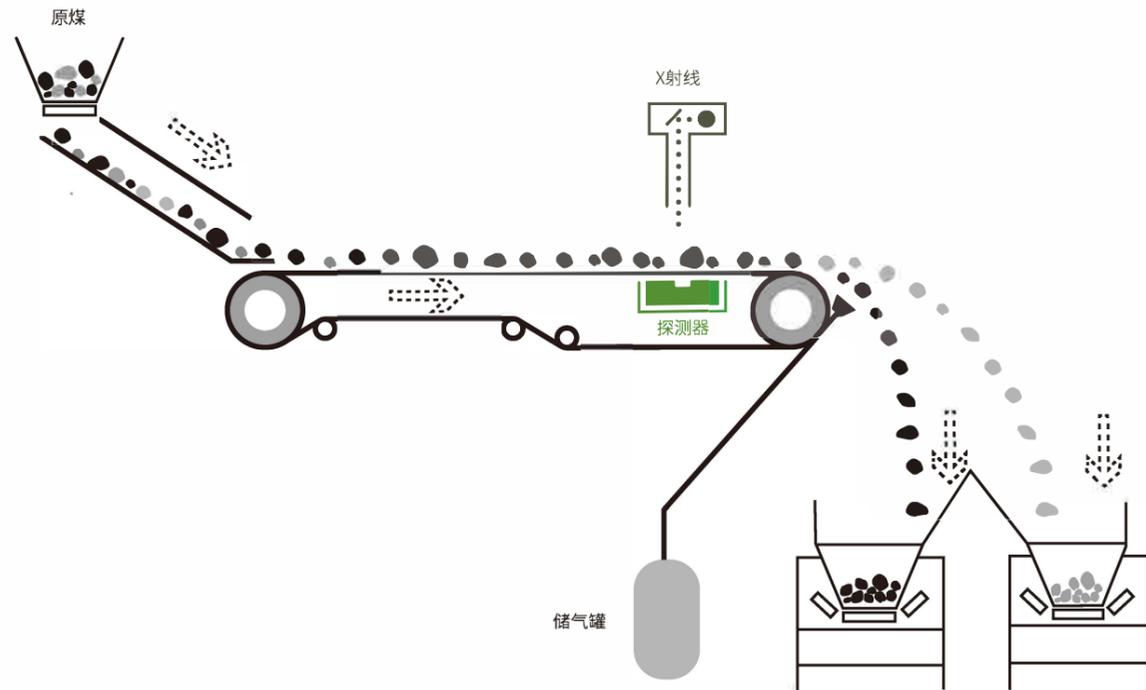

## 06 Dust removal system

Equipped with a professional dust removal system, the dust generated during the operation of the equipment can be recovered. The system has the characteristics of simple structure, smooth and reliable operation, long service life and high dust removal efficiency.

## 07 Ray shielding protection system

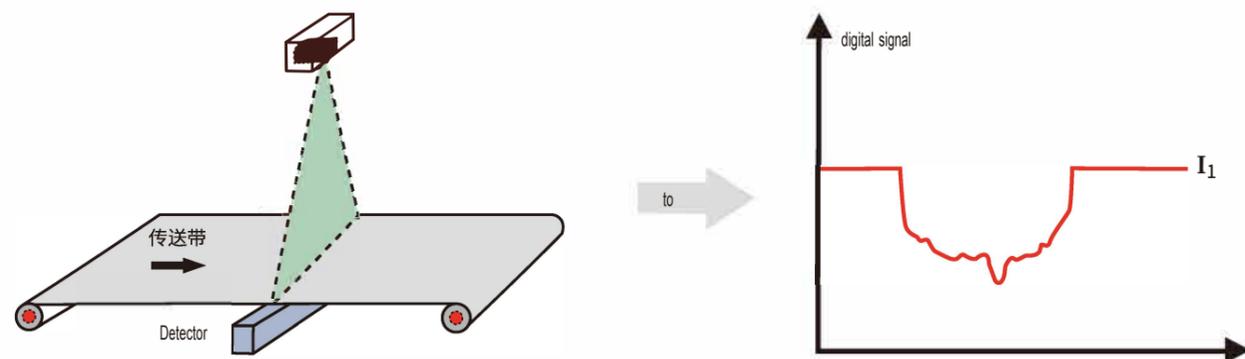

Using Class III radiation device. Equipped with a complete radiation shielding protection system, the radiation value is better than the national standard.

# EQUIPMENT PRINCIPLE

## Basic Principle

The dual-energy X-ray scanning imaging system is used to collect material images, and deep learning image recognition technology is used to analyze the images, determine the type of material, and accurately control the high-pressure wind to blow coal or rock to achieve accurate, efficient, and energy-saving fully automatic Coal sorting.

# APPLICATION RANGE

01

Coking coal  
pre-discharge gangue

Electrical coal waste discharge increases calorific value  
Reduce moisture

Coking coal pre-discharge gangue  
Reduce the proportion of gangue

Replace manual selection

Replaces moving screen jigging  
saving water

02

Thermal coal  
products

Dry coal preparation in cold areas  
avoid freezing

Remove gangue at pithead  
Reduce transport costs

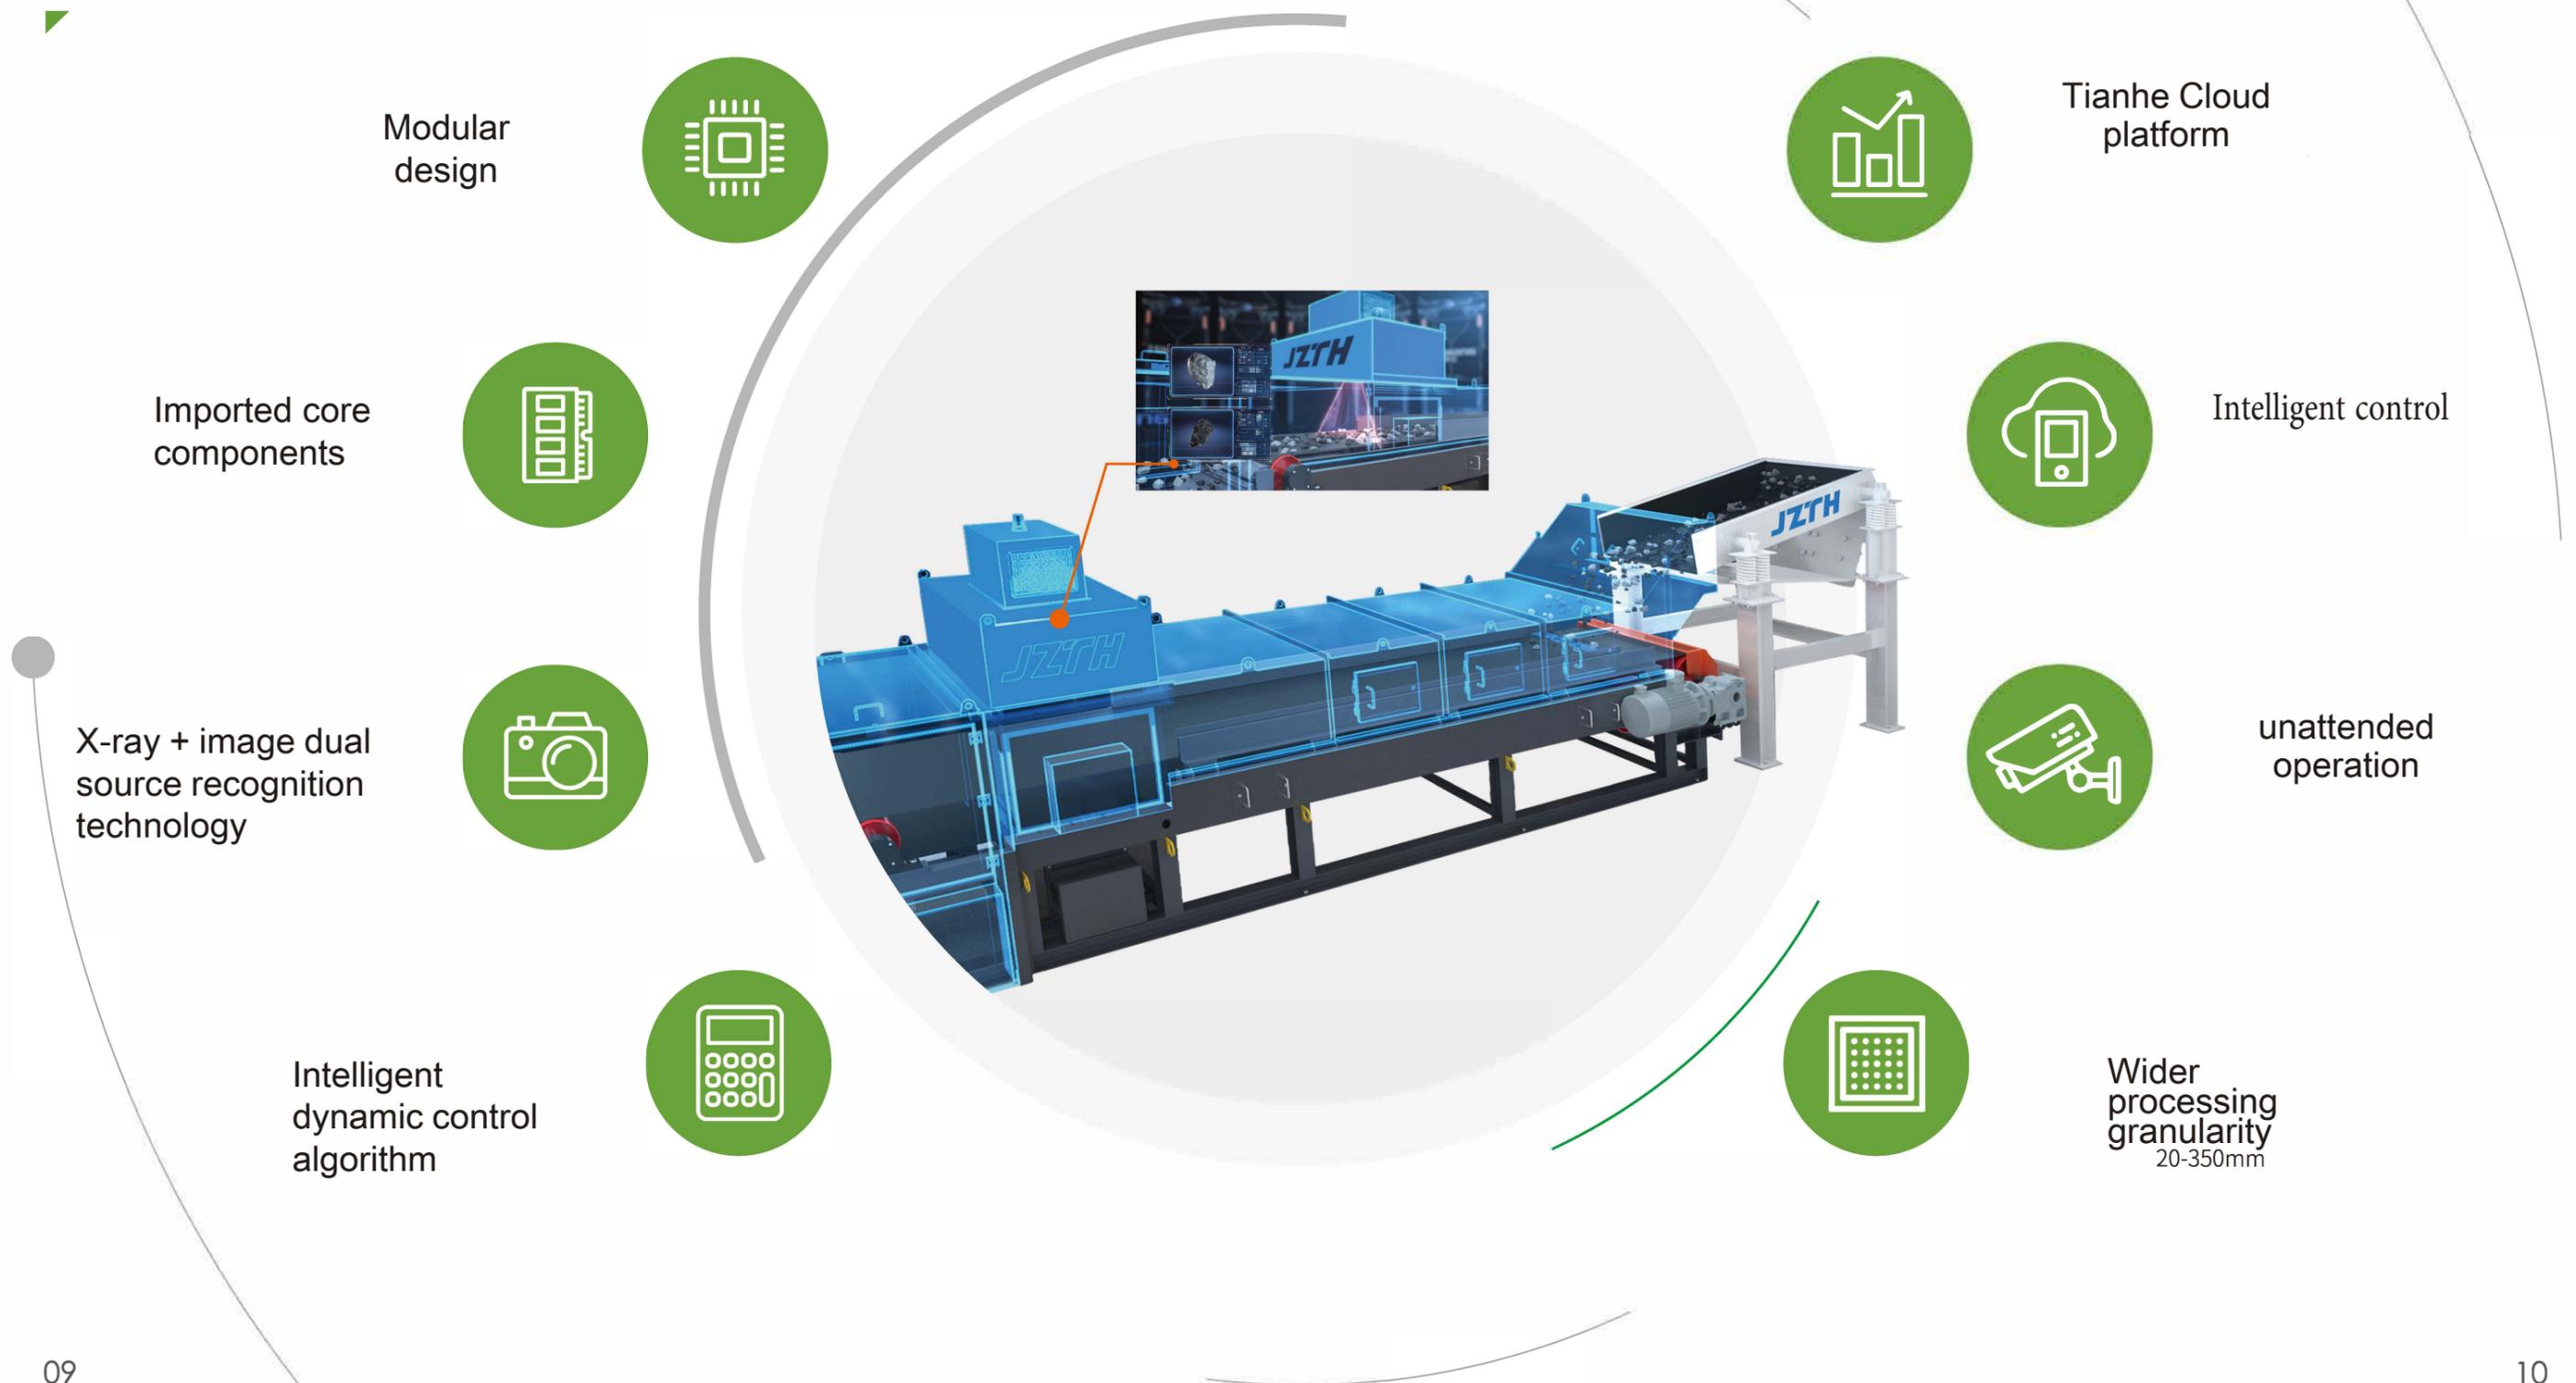

Lignite meets cement  
Suitable for dry selection

Replaces tank  
Avoid using media

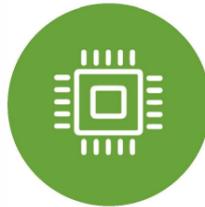

03

Underground  
pre-discharge of  
gangue

# TECHNICAL CHARACTERISTICS

Modular design

Tianhe Cloud platform

Imported core components

Intelligent control

X-ray + image dual source recognition technology

unattended operation

Intelligent dynamic control algorithm

Wider processing granularity  
20-350mm

## INDUSTRIAL EXPERIMENTAL BASE

智能干选  
工厂级实验基地

## PROJECT SERVICE

► "JZTH not only provides high-quality equipment, but more importantly, professional and high-quality technology and services!" Adhering to the development concept of mutual benefit, win-win sharing and joint creation of value, JZTH will stay closely with customers and partners.

24  
HOUR

One year guarantee

Professional team  
Over 100 engineers

# EQUIPMENT MODEL SELECTION

350-50mm Intelligent dry separator Model selection list

	TH10-300	TH12-300	TH16-300	TH20-300	TH24-300	TH28-300	TH32-300	TH36-300	TH40-300
Belt distributor width(mm)	1000	1200	1600	2000	2400	2800	3200	3600	4000
Capacity(t/h)	100	120	160	200	240	280	320	360	400

150-20mm Intelligent dry separator Model selection list

	TH10-150	TH12-150	TH16-150	TH20-150	TH24-150	TH28-150	TH32-150	TH36-150	TH40-150
Belt distributor width(mm)	1000	1200	1600	2000	2400	2800	3200	3600	4000
Capacity(t/h)	50	70	90	110	130	150	180	200	230
